March 2, 2011

Dear OPRA Market Data Recipients:

Due to some Data Recipients requiring additional test time, the implementation of market data on the full 48 line network scheduled for March 7, 2011 has been delayed. The final verification check out with the new traffic distribution has also been delayed. The new schedule has not been finalized. The new date is expected to be in March.

The 48 line configuration will be available for testing on March 5, 2011. On March 7, 2011, Lines 1-24 will contain market data while lines 25-48 will contain only line integrity and administrative test messages.

Very truly yours,

Joe Corrigan
Executive Director
