Dear OPRA Market Data Recipients:

OPRA has been supporting dual networks (ASCII and FAST). Operating dual networks decreases OPRA capacity and increases bandwidth utilization. FAST is working well and is available to be used in production at this time.

Because of expected future growth in message traffic, OPRA needs the additional bandwidth that the FAST network provides. The FAST network has resulted in a 70% reduction in bandwidth utilization when compared to ASCII. OPRA has decided to eliminate the ASCII network and only support FAST. The ASCII network will not be available after January 25, 2008. As of the start of day, January 28, 2008, the FAST network will be the only network available.

Data Recipient notices with details on FAST are available at www.opradata.com under Specifications.

For testing, contact Joe Loughran at (212) 383-4908. All Indirect Data Recipients must contact their direct service providers to coordinate testing.

Very truly yours,

Joe Corrigan
Executive Director
