TO: OPRA VENDORS and DATA RECIPIENTS

RE: OPRA ISSUE October 30, 2014

At approximately 1:07 PM ET, there was a network hardware failure impacting the CTS/CQS/OPRA data feeds at the primary data center. At approximately 1:34 PM ET, after investigation of the issue, SIAC made the determination to switch over to the secondary data center in Chicago for the CTS/CQS data feeds and then the OPRA data feed. Normal processing resumed in Chicago at approximately 1:34 PM ET for CQS, approximately 1:37 PM ET for CTS, and approximately 1:41 PM ET for OPRA. Industry exchanges then connected to the secondary data center in Chicago as provided for in SIAC’s business continuity plan. We will operate CTS/CQS/OPRA out of the secondary data center for the remainder of the day and will restore normal operations from the primary data center for Friday, October 31.

Sincerely,

OPRA, LLC
