- (1) Service level guidelines: (A) 99.98% system availability; (B) 10 minute recovery time for full system failures; (C) Operations production support 24x5 in primary and backup data center and test support provided on Tuesdays, Thursdays, and Saturdays.
- (2) Beginning 1Q14, capacity planning interval changed from 1-second to 100-milliseconds.
- (3) Prior to 1Q13, latency was measured from the time a message received from a Participant was time-stamped by OPRA, to the time that processing the message was completed. Beginning 1Q13, message latency is measured beginning with the time-stamp taken as an inbound Participant message arrives at the network entrance to the OPRA environment, through processing by the system into a consolidated message for Data Recipients, to the time-stamp taken as the outbound message arrives at the network exit from the environment. Latency is represented in milliseconds.
